(IS 60T) 1 SECOND TO 64 WEEK TIMER

Timer operates on 12 or 24volts DC. Just connect to the unit and the timer will automatically adjust to the supply voltage Ideal to monitor the opening of a fire or emergency exit door

Four modes of operation selected by jumper link:

- A. Relay energised **AFTER** delay/expired time
- B. Relay energised FOR timed period
- C. Trigger must still be present **AFTER** the timed period for the relay to activate and latch **until reset**
- D. The same as mode C, but is **non**latching resets as soon as trigger is
 removed (the door is closed)

Modes A, C and D have an additional feature – if the AUTO link is fitted the relay will reset after 20 seconds.

Inputs to both TRIG and RESET can be HIGH or LOW selected by Jumper link (in simple terms the means that it can be triggered and reset by connecting the inputs 12v or 0v)

Operating Voltage	10.5 - 28 Volts DC
Relay Contacts	8 Amps at 240 V AC
rated at	8 Amps at 30 V DC
	minimum 10 mA
Current when	34 mA
energised	
Dimensions	47mm (W)
	78mm (L)
	22mm (H)
Packing Weight	46a
